### Chart of the week: Global credit spreads – YTD 2022

Source: ICE indices, Bloomberg, Columbia Threadneedle Investments, as at 30 June 2022.

## Macro / government bonds

We have reached the mid-point in this year of financial market collapse.

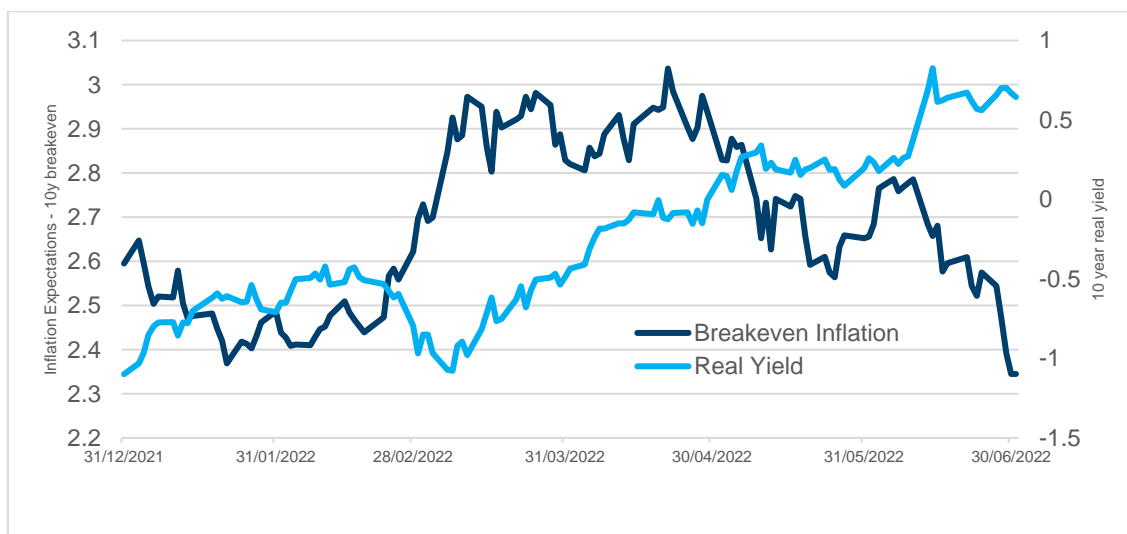

Equity markets have spiralled lower and credit market spreads gapped wider, but the traditional role played in portfolios of core government bonds has been more than lacking. Indeed, aside the last week or two yields have continued higher though the second quarter. In our view, this makes some sense this time. Markets were buffeted by rising inflation and expectations from March of 2020 through to late spring of this year. Since then, expectations have fallen on a 10-year basis from over 3% to under 2.5% in the US market. What hasn't fallen has been real yields. As central banks raise rates and dismantle balance sheets this discount rate has risen massively. The real yield on US inflation protected bonds has gone up from less than -1% to around 0.7% in the space of six months. How does that real yield compare to long term averages? Not that well really. Since their introduction in 1996 the average real yield has been around 1.5%. So more to go if you believe in mean reversion ([see second chart of the week](#)).

A theme that has developed this quarter has been this shift from inflation worries to recession concerns, but it is a widely anticipated anxiety. In a survey conducted by Deutsche Bank it appears around 90% of respondents expect a recession within the next 18 months. This is up from around one in three at the end of last year.

There was no shortage of poor data to underpin this pessimism last week. Consumer sentiment data came in at a record low in Germany and was the weakest since 2013 in France. Meanwhile, US jobless claims rose on a four-week average basis to the highest this year while unemployment also rose in Germany.

On the inflation front there were mixed messages in Europe: Spanish prices rose by 10% y/y, which was well ahead of the 8.7% forecast. However, data from Germany was weaker led lower by tax breaks to 8.2%, which was around 0.5% less than expected. On the manufacturing side, the Dallas Federal Reserve noted that confidence reached a two-year low. As mentioned last week this 'bad news' is being seen as good news for core government bond markets where yields fell again and sharply into the close of quarter and Independence Day in the US.

### Second chart of the week: US 10-year inflation expectations and real yields – YTD

Source: Bloomberg, Columbia Threadneedle Investments, as at 1 July 2022.

## Investment grade credit

While it was a difficult quarter for government bonds it was worse still for credit markets.

For the global investment grade area, the total return in the first three months of the year delivered a near 7% decline in local currency terms. This performance was matched in last three months with another 7% drawdown. 2022 is, as a result, easily the weakest year for total returns since index data began in 1997.

By currency area, euro-denominated credit has underperformed, and by a wide margin. This is driven by wider swap spreads but also thinner, less liquid markets in these difficult times. While US dollar market spreads are over 60% wider, the euro market has seen spreads more than double in only six months. Interestingly, euro IG has underperformed euro HY on a risk-adjusted basis, while the reverse is true in the US market.

Short-dated credit has underperformed as credit curves flatten. Notably the 1–5-year US dollar index has seen spreads widen by a similar amount to the euro market while long-dated debt in this market is only around 40% wider.

On a sector basis autos, real estate and banking have been the underperformers, while energy (rising oil price), telecoms and utilities (non-cyclical) have held up best. So cyclicality is being hurt as recession fears rise. Ratings wise, riskier credit (ie, BBBs) have underperformed while AAAs have performed best on a risk-adjusted / percentage basis.

We tend to consider a few variables in assessing the direction of credit spreads. In summary we are left on ‘the right side of okay’ on direction but that is not an emphatic view.

We know policy conditions will provide a headwind as they move from accommodative through neutral to restrictive. We also expect global growth to continue to slow, though we do not yet forecast the slowdown to become a full blown (two quarters) recession. This environment is not that bad. Low but positive growth will rein in ‘animal spirits’ in the corporate boardroom yet avoid material corporate distress / rising defaults. Our assessment of corporate fundamentals remains positive and suggests ongoing improvement.

What of valuations? Spreads on a global basis are 1.8 standard deviations (SDs) cheap to a five-year average but only 0.5 cheap on a longer-term, 20-year comparison. Indeed, if we adjust the index for the decline in credit quality and increase in duration over those two decades the number falls to only 0.2 SDs cheap. So reasonable rather than outstanding value. As mentioned, though, the euro market stands out in valuation terms and is over 3 SDs over the shorter and over 1 SD cheap compared to the longer-term average.

Lastly, heightened volatility and periods of challenged liquidity often offer an interesting entry point to the market, and this is the case currently.

## High yield credit & leveraged loans

The European High Yield (EHY) market continued to be challenged, like most risk assets, last week. June finished with spreads wider by 167bps ending at 661bps (bringing Q2 spreads 210bps wider) as yields rose 190bps closing at a YTD high of 7.8%. Excluding March 2020 and its quarter, it was the worst performing month and quarter since the autumn of 2008 as the month’s return was -7.1% resulting in a Q2 return of -11% and YTD return of -14%. Fund flows continued toward the exit door, with net flows hitting -€4.5 bn for Q2 and -€8.5bn YTD (11% of the EHY universe). With the exception of short-dated BBs, the majority of the market appeared very difficult to trade, with riskier credits (single Bs and CCCs) largely only showing offer prices. In terms of sectors, cyclicals were the major underperformers. ETFs traded at a discount, as much as by 2 points. The primary market was closed last week as the 888 deal was again postponed. With only €6bn issued in Q2 and only €20bn YTD (80% lower y/y), new issuance has been very low.

In credit rating news, S&P upgraded Premier Foods PLC to BB from BB-. In sector news, real estate came under attack as SBB, the Swedish real estate group, was hit by Viceroy reports directed at them. Other real estate names suffered by association. At Adler Group, an earlier Viceroy target, the chairman mentioned breaking up the company as an option to the firm's current difficult situation. Without auditors (KPMG resigned) and given the investigation by German financial watchdog BaFin, we see 'limited potential for recovery' under the current scenario. In M&A news, Atlantia announced the acquisition of Yunex Traffic from Siemens for €950m.

## Asian credit

The Government of India has imposed a windfall tax on crude oil and levied export duties on petrol, diesel and aviation turbine fuel. For crude oil, the windfall tax is INR23,250/t (\$294/t) which translates to around \$41/bbl. With regards to refined products, the export duties are INR6/litre and INR13/litre for petrol and diesel respectively. The government also announced that 50% of gasoline and 30% of diesel from domestic refineries must be dedicated for domestic consumption. The finance minister stated that the imposed taxes would be reviewed every 15 days. This latest tax environment is negative for the oil producers (ONGC, Oil India, Cairn India) as well as Reliance Industries, which exports around 70%-80% of its refined products.

Globe Telecom (Philippines mobile telecommunications operator) is reportedly in talks to sell around 6,000 towers in a sales-and-leaseback transaction. The bidders include a consortium of Stonepeak Partners/Manila Electric as well as Partners Group Holding and Aboitiz Group.

In the Chinese property sector, Shimao Group missed paying a \$1bn bond that matured on 3 July. Sunac China received bondholders' consent to partly defer the amortization payments in June (10%) and September (15%) for its CNY4bn 4.78% onshore bond. This bond was puttable in April 2022 and the company secured bondholders' approval for an 18-month extension repayment for which it paid the first instalment of 10% in May.

## Emerging markets

As global risk assets sold off, emerging market bonds were no exception. Over the quarter, hard currency sovereigns posted a negative return of -11%. While spreads were initially resilient in the first half of the quarter, significant widening took place in June as inflation pressures increased, global growth expectations diminished, and fears of a recession created headwinds for the asset class. Against this backdrop, spreads on the JPM EMBI Global widened 78bps to 460bps, and high yield assets bore the brunt, widening 239bps, most notably in Africa, as less liquid, high beta names suffered the most.

China's zero covid policy remains in place; however, restrictions have eased a little, giving hope that economic activity should improve, and a moderate growth rebound should follow.

Latin American politics have been lively; Columbia elected populist Gustavo Petro, and Ecuadorian President Lasso survived an impeachment vote. War in Ukraine continues as sanctions have not been able to curtail Putin's ambitions. The invasion has sent food and energy prices higher, contributing further to the global inflation problem. However, central banks in emerging market regions have, on the whole, been proactive utilising monetary policy to combat rising inflation; we've seen many hikes in Latin America and Europe and expect to see Asian policy makers beginning their hiking cycles soon.

## Commodities

Commodities, unlike many other asset classes saw a reversal of fortune in the second quarter (**see third chart of the week**). Oil prices were an outlier, however, and rose around 6+% in Q2 though that was eclipsed by European natural gas prices, which rose nearly 15%.

For other areas of the commodity complex fears of recession tore into sentiment and forced prices lower, such as industrial metals. This was notable last week with weaker zinc prices. Meanwhile hopes of increase in grain exports from Ukraine dented such prices, which fell around 7% in the last seven days.

### Third chart of the week: Commodity prices – YTD 2022

Source: Bloomberg, Columbia Threadneedle Investments, as at 1 July 2022.

## Responsible investments

Social bond issuance suffered the most this quarter, and YTD, as under half as many bonds have been issued in 2022, in comparison to last year. However, social issuance had a boost from the numerous emergency response 'Pandemic Bonds' being issued in 2020 through to the beginning of 2021, but even generally speaking social, green, sustainable and sustainability-linked bond issuance has been down this year. Total issuance for the ESG market stands at \$500bn, down around 20% from this time last year, according to Bloomberg. Green bonds still take top spot on the podium for most issuance YTD, on the back of gatherings such as COP26 and other various environmental summits over the last 12 months, the effect has very much lasted with corporates, governments and supranationals continuing to bring green deals to the market.

As we look ahead, the second half of 2022 will bring numerous regulations and changes into effect, meaning some so-called 'ESG' labelled securities and funds may lose that title as rules are made stricter.

## Summary of fixed income asset allocation views

### Fixed Income Asset Allocation Views
