The Share Class currency, unless indicated as a Hedged Share Class, is a translated price using exchange rates at the official valuation point of the fund. This is intended as a way to access a Share Class in your chosen currency and does not reduce your overall exposure to foreign currency. The fund currency indicates the highest currency exposure of the fund unless the currency breakdown is detailed in the Weightings % table on page 2.

Investment Objective & Policy

The Fund aims to provide a positive real rate of return, i.e. above the rate of inflation (as measured by the US CPI Seasonally Adjusted Index) over the medium to long term, notwithstanding changing market conditions. Positive returns are not guaranteed and no form of capital protection applies.

The Fund is actively managed and invests at least two-thirds of its assets in shares of companies and investment grade and below investment grade bonds (which are similar to a loan and pay a fixed or variable interest rate) issued by companies and governments worldwide. Bonds rated as below investment grade have received lower ratings from international agencies that provide such ratings and are considered riskier than higher rated bonds but typically pay a higher income.

The Fund may also invest in commodities through other funds or derivatives. Commodities are physical materials such as oil, agricultural products, and metals.

The Fund invests directly in these assets or indirectly through other funds or by using derivatives (complex instruments). The Fund may also use derivatives for hedging purposes or to manage the Fund more efficiently. Derivatives may create leverage (market exposure in excess of the net asset value of the Fund). The Fund will not invest directly in physical commodities or property.

The Fund may also invest in asset classes and instruments different from those stated above and has the flexibility to vary its exposure to or at times choose not to invest in some of the asset classes listed in order to achieve the investment objective.

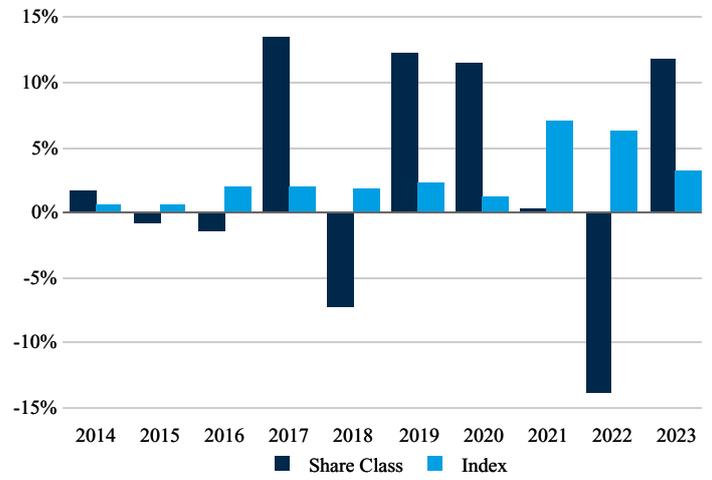

Risks

- The value of investments can fall as well as rise and investors might not get back the sum originally invested.
- As this Fund invests into other funds you should consider the underlying investments and overall risks.
- Where investments are in assets that are denominated in multiple currencies, or currencies other than your own, changes in exchange rates may affect the value of the investments.
- Positive returns are not guaranteed and no form of capital protection applies.
- The Fund invests in securities whose value would be significantly affected if the issuer refused, was unable to or was perceived to be unable to pay.
- The Fund targets returns in excess of inflation. In times of heightened inflation this may not be possible to achieve.
- Changes in interest rates are likely to affect the Fund's value. In general, as interest rates rise, the price of a fixed rate bond will fall, and vice versa.
- The Fund's assets may sometimes be difficult to value objectively and the actual value may not be recognised until assets are sold.
- The Fund may invest materially in derivatives (complex instruments linked to the rise and fall of the value of other assets). A relatively small change in the value of the underlying investment may have a much larger positive or negative impact on the value of the derivative.
- The fund may exhibit significant price volatility.
- The risks currently identified as applying to the Fund are set out in the "Risk Factors" section of the prospectus.

Past performance is not a guide to future performance. The value of investments and any income is not guaranteed and can go down as well as up and may be affected by exchange rate fluctuations. This means that an investor may not get back the amount invested. Index returns assume reinvestment of dividends and capital gains and unlike fund returns do not reflect fees or expenses. The index is unmanaged and cannot be invested directly. All returns assume income is reinvested for a local taxpayer, bid to bid performance (which means performance does not include the effect of any initial charges).
